

The advantages at a glance

Ceiling Lift System UNILIFT - The individual solution for more independence

- › Can be used in wet and dry rooms
- › Ceiling or wall mount keeps the floor clear
- › Easy, smooth and safe transport
- › Can be expanded individually, numerous components available
- › Electric lift motor, optional drive motor
- › Lifting capacity up to 600 pounds lbs. or 275 kg
- › Emergency on/off button
- › Emergency lowering
- › Spreader bar or patient positioner
- › Versatile sling program for a wide range of applications
- › 2, 4, 6 or 8 functions controlled via hand control
 - 2 function - lift/lower
 - 4 function - lift/lower/right/left
 - 6 function - lift/lower/right/left/forward/backward
 - 8 function - lift/lower/right/left/forward/backward gate/switch/carousel

The individual solution for more independence, designed for safe patient lifting.

The UNILIFT ceiling lift series offers nearly unlimited options and has been used successfully worldwide for years. The UNILIFT system consists of various rails, curves, and trans-verses. It is mounted permanently on the ceiling or wall, to individually fit the dimensions of any room. The components of the system are expandable and match up perfectly.

Adjustable switches on the ceiling rails enable patients to move to different rooms on one floor using the lift. These systems have been thoroughly designed, and represent the state-of-the-art in safety technology. Thus, persons with walking impairments can use the lift and the electric motor to move from the bed to the bath or toilet without any problem.

In addition, UNILIFT eliminates the need for the uncomfortable transfer that is often only possible with assistance of others by means of different lift systems.
