

Mobility & Transfer Aid BEA

The BEA is an ergonomic and compact mobility and transfer aid, meant for people with low bone strength but with trunk balance.

The BEA provides support on going and is an efficient tool for the health care provider and the client. The BEA is designed for people up to 150 kg. Mobility and transfer Place the feet on pull up and go. As a result, the client is encouraged to stay active.

The caregiver swings the seats to the side and opens the separated seating surfaces. The BEA is specially designed for use in wet room and fits to most common toilets. Do an annually construction check on the wheels regularly.
